

24th & 25th February 2016

Lyon Equipment Rescue Specialist workshop

We thought we'd let you know that plans are underway for a Rescue Specialist Workshop to be hosted by Lyon Equipment in February next year.

This 2-day event will take place at Lyon Equipment's Training Centre in Tebay, Cumbria and at our very own river gorge at Lune's Bridge, just south of Tebay.

Experts from across the rescue spectrum will provide demonstrations of simulated rescue in environments such as river gorges, fast water, tree canopies and zip-wires. There will also be a large animal rescue demonstration plus presentations on specialist equipment development and options for these demanding situations. We will also have a drone on site at Lune's bridge to demonstrate their use in a rescue situation and film the action.

Practical demonstrations confirmed to date will include:

- Boat on a Highline System - putting theory into practice - R3 Safety and Rescue
- Zip line rescue – Technical Outdoor Solutions
- Highlines and cableways – logistics and forces – Lyon Equipment
- Tree canopy rescue - Treepartner
- Large animal rescue – Fire & Rescue Service
- Use of drones in rescue - Droneflight

Presentations will include:

- Opinion or fact? - myth busting for work at height and rescue – Mark Davies, Lyon Equipment
- In-water quick release harness performance and developments - Dr Loel Collins, Senior Lecturer, University of Central Lancashire and Chris Onions, R3 Safety and Rescue
- PPE considerations for the mixed environment – Dr Mark Taylor, Leeds University
- Veterinary considerations for large animal rescue

Further details and booking forms will be available soon, so look out for news on our website at www.lyon.co.uk/workandrescue. To register your interest in or find out more about this exciting event, please contact training@lyon.co.uk.
